

Nant-Health: Training with VDIs

Early in 2018, Dispel was contracted to provide custom virtual desktops to NantHealth over sporadic one week engagements. These desktops were then used by trainers at NantHealth to teach customers how to efficiently install, configure, and manage a number of their proprietary tools and programs.

Of particular interest to NantHealth was the ability to give each trainee their own pair of virtual systems to work on. Should anything catastrophic happen, they could delete the instance(s) and begin with fresh ones after a short re-build.

Each Desktop was given a unique password for additional security, which administrators could easily distribute from the Dispel Console. As a result of having these desktops available, the company has been able to open up a new revenue stream, and avoid traveling with physical hardware to each client.

"While the inherent security of their technologies interested my team, it was Dispel's ability to deliver the systems I needed ahead of schedule and tailored to NantHealth's particular requirements that won me over."

Deb Cafarella
Sr. Director of IT

Training Session Breakdown

Virtual Desktop Types

- Microsoft Windows Server 2012 R2 with Microsoft SQL Server 2014
- Microsoft Windows 10 Pro
- Each Desktop type additionally had a number of dependent applications integrated.
